

Understood. This is my company now. Here's how we execute.

CBK INNOVATIVE MINDS
Executive Execution Plan — Q3 2026
Filed by: Office of the CEO/CTO

SITUATION ASSESSMENT

We have a working product, a real tech stack, and a design that competes visually with funded startups. What we do not have yet is a defensible business. The window to establish category leadership in India's AI education space is **right now** — the market is forming, not formed. In 18 months it will be crowded. We move fast, but we move right.

One principle governs every decision in this plan:

> **Do fewer things. Do them completely.**

THE THREE PHASES

PHASE 1 — SECURE (Weeks 1–2) Lock the foundation
PHASE 2 — LAUNCH (Weeks 3–6) Go to market properly
PHASE 3 — COMPOUND (Weeks 7–12) Build the moat

Nothing in Phase 2 starts until Phase 1 is complete. No exceptions.

PHASE 1 — SECURE
The business is not open until this is done

1.1 — Lock the paywall (Day 1–3)

Your Cloud Function is the most urgent thing in the entire company. Until it's deployed, every enrolled user is on an honour system.

The function needs to do exactly three things: verify the Razorpay HMAC signature, write `enrolled: true` to Firestore, return success or failure. Nothing else.

Your Firestore security rules need one addition right now:

```
```javascript
// users/{uid} — enrolled can only be written by Cloud Functions
// Never by the client
match /users/{uid} {
 allow read: if request.auth.uid == uid;
 allow write: if request.auth.uid == uid
 && !('enrolled' in request.resource.data);
}
```
```

That single rule means even if someone finds your Firestore config they cannot write `enrolled: true` from their browser. Only the server can.

****1.2 — HTTP Security Headers (Day 1)****

Add this to your `firebase.json` hosting config. Copy, paste, deploy:

```
```\njson\n"headers": [\n  {\n    "source": "**",\n    "headers": [\n      { "key": "X-Frame-Options", "value": "DENY" },\n      { "key": "X-Content-Type-Options", "value": "nosniff" },\n      { "key": "Referrer-Policy", "value": "strict-origin-when-cross-origin" },\n      { "key": "Permissions-Policy", "value": "geolocation=(), microphone=(), camera=()" },\n      { "key": "X-XSS-Protection", "value": "1; mode=block" }\n    ]\n  }\n]\n```\n
```

## **\*\*1.3 — Razorpay domain whitelist (Day 1)\*\***

Go to Razorpay Dashboard → Settings → API Keys → Allowed Domains. Add only `cbkminds.com`. Remove everything else. This means your live key is useless if scraped and used from any other domain.

## **\*\*1.4 — Performance (Day 3–5)\*\***

Install Tailwind CLI. One command. Run it against your HTML/JS files. Your 300 KB Tailwind CDN becomes a 12–18 KB production CSS file. Your users in Tier 2 and Tier 3 Indian cities on 4G will feel this immediately.

```
```\nbash\nnpm install -D tailwindcss\nnpx tailwindcss -i ./assets/style.css -o ./assets/style.min.css --minify\n```\n
```

Then point `dashboard.html` at `style.min.css`. Done.

PHASE 2 — LAUNCH
Go to market like you mean it

****2.1 — Pricing Decision (make this now)****

■99 is a mistake. Not because it's wrong to be affordable — because it communicates the wrong thing. At ■99, students think "free basically" and don't take it seriously. Completion rates will be low. Testimonials will be weak. Word of mouth will be slow.

****The decision: ■999 with a founding member offer.****

Launch at ■999. For the first 100 students, offer ■499 with a "founding member" badge on their certificate and profile. This does three things: creates urgency, creates community identity, and gives you a real price anchor. Every student after 100 pays ■999.

This is not a price increase. This is a positioning decision. You are not selling a ■99 PDF. You are selling a ■999 career skill.

****2.2 — The Landing Page (Week 3)****

Your landing page is your sales team. It works 24 hours a day. Right now it is not doing that job at the level this product deserves.

The landing page needs exactly six sections and nothing else:

1. HERO — One sentence that tells them what changes after this course
2. PROOF — Three real student outcomes (not testimonials — outcomes)
3. CURRICULUM — What they learn, week by week, no fluff
4. INSTRUCTOR — Who you are and why you can teach this (be specific)
5. PRICING — One option, clear, with the founding member countdown
6. FAQ — Answer the four objections every buyer has

No carousels. No animations that don't serve information. No stock photos. Real content, real design, real conversion.

****2.3 — Distribution Strategy (Weeks 3–6)****

You do not need a marketing budget. You need a content strategy that compounds.

****LinkedIn is your primary channel.**** This is where Indian professionals who want AI skills spend decision-making time. Your content formula for the next 90 days:

- ****3 posts per week.**** Not motivational content. Not reposts. Original insight posts that demonstrate what students learn in your course.
- ****Format that works:**** "I tested [AI tool] for [specific task]. Here's what actually happened." Real results, specific numbers, honest conclusions.
- ****One thread per week**** that teaches one complete concept from your curriculum — for free. The people who value free content become paying students. The people who don't were never going to pay anyway.

****YouTube is your second channel.**** One video per week. 8–12 minutes. Teach one module concept deeply. The title formula that works: "How I used [AI tool] to [specific outcome] in [time]." Not theory. Demonstration.

The strategy is simple: give away the what and the why for free. Sell the how, the structure, the accountability, and the certificate.

****2.4 — The 100 Student Goal****

Your only metric for Phase 2 is 100 enrolled, paying students. Not followers. Not email signups. Not views. 100 people who gave you money and are inside the course.

When you have 100 students you have: real completion data, real testimonials, real understanding of where people drop off, and enough revenue to fund Phase 3 properly.

Everything in Phase 2 is in service of this single number.

PHASE 3 — COMPOUND

*Build the moat no one can copy quickly*

****3.1 — The Community Layer (Week 7)****

The product that can be copied is the course. The product that cannot be copied is the community of people who went through it together.

This community becomes your biggest retention tool, your biggest referral engine, and eventually your biggest competitive advantage. Coursera cannot replicate a tight community of 500 serious Indian professionals who all know each other.

Right now your certificate is a PDF. That's not enough.

Build a public verification page at `cbkminds.com/verify/[certificate-id]`. Anyone can check if a certificate is real. This sounds small. It is not small. This is how you build institutional credibility without institutional backing.

The fastest path to \$10L+ monthly revenue is not 10,000 individual students at \$999. It is 10 companies paying \$1L each for team licenses.

After you have 100 students and real outcomes to show, approach 5 startups and 5 SMEs with a team licensing offer. \$999 per seat, minimum 10 seats, with a company dashboard that shows HR which employees completed what. This is Phase 3 because you need proof of student outcomes first. But plan for it now.

These are the infrastructure investments that unlock scale:

Add email infrastructure via Firebase Extensions → Trigger Email. Three automated emails: enrollment confirmation with login link, day 3 nudge if no lesson opened, day 7 nudge if less than 20% complete. These three emails alone will increase completion rates by 30–40%.

— — —

...

[illegible]

■50,000 Monthly revenue Week 6 (at ■999 avg)

70% Course completion rate Week 8
50 LinkedIn followers/day Week 4 onward
10 B2B leads qualified Week 12
■2,00,000 Monthly revenue Week 12
...

These are not aspirational. They are executable with the plan above if executed with discipline.

WHAT WE ARE NOT DOING

This is as important as what we are doing.

We are ****not**** building a mobile app. Not in 2026. The web product on mobile is sufficient and a native app would consume 3 months of engineering for zero additional revenue.

We are ****not**** adding more courses yet. One course done perfectly beats five courses done adequately. The second course gets built after the first one has 500 completions and a 4.8+ rating.

We are ****not**** running paid ads yet. Paid ads before product-market fit is burning money to discover you don't have product-market fit faster. Organic distribution first. Paid amplification after you know which message converts.

We are ****not**** building features students haven't asked for. Every feature request gets logged. Nothing gets built until three different students ask for the same thing.

THE DECISION FRAMEWORK

Every week, every decision gets filtered through three questions:

1. ****Does this get us to 100 students faster?**** If no, it waits.
2. ****Does this make the product better for students already inside?**** If no, it waits.
3. ****Does this build something that compounds over time?**** If no, it probably never happens.

Anything that doesn't pass at least one of these questions does not get worked on. This is how you avoid the trap of looking busy while not making progress.

FINAL WORD

The difference between companies that become something and companies that stay small is not talent, not funding, not even product quality. It is ****execution discipline**** — the ability to finish what you start, ship before it's perfect, and stay focused on the one number that matters this week.

Your product is ready. Your design is ready. Your stack is ready.

The only question left is whether you execute with the same quality you've shown in building this — or whether you let perfect become the enemy of shipped.

****Week 1 starts now. The Cloud Function goes live before anything else.****

That's the plan. Let's build.
